OVERVIEW

Kodiak is strategically enhancing its client recruitment operations to mitigate the difficulties, time, and expenses associated with securing premier construction talent with remarkable precision. Distinct from conventional sales-driven methodologies, Kodiak's innovative strategy emphasizes recruitment. This focus enables the organization to sustain a reservoir of construction experts for immediate hiring and a repository of variable, on-demand crafts professionals, thereby ensuring extensive support.

Challenge:

A leading offsite construction manufacturer, with a 750,000 square foot production area, faced a product backlog of over 8 months, leading to missed opportunities with mechanical clients and a potential customer needing piping systems delivered within 3-5 months. Additionally, the company struggled with employee burnout due to staff shortages, resulting in excessive overtime and weekend work, causing turnover among both craft and management staff.

Solution:

KODIAK's sales consultants and recruiters analyzed the mid-sized Southeast market, identifying a significant demand for specialized tradespeople, such as welders and electricians, exceeding local supply within a 50-mile radius of their target facility. To tackle this, KODIAK introduced a strategic hybrid craft staffing model, comprising:

- 1 **Local Recruitment:** Utilizing KODIAK's and the client's databases and digital campaigns on leading job boards to engage local talent.
- 2 **Regional Recruitment:** Offering a per diem to workers within a 100-mile radius to work at the facility during the week and return home on weekends.
- 3 **National Recruitment:** Expanding the search nationwide through KODIAK's network and online platforms, targeting experienced professionals open to travel for long-term projects with competitive pay.

Outcomes:

- By adopting a comprehensive strategy, KODIAK successfully ensured the continuous availability of highly skilled labor throughout the project(s).
- Within a three-month timeframe, the modular construction manufacturer managed to decrease its backlog by 2.4 months, aligning with the client's product delivery specifications.
- Production capacity rose by 11% in the first month and 29% over four months.
- The strategy resulted in a 78% decrease in employee turnover, cutting down on recruitment and onboarding costs.
